SENIOR PHP / LARAVEL DEVELOPER

Senior PHP/Laravel developer with 15+ years building and supporting e-commerce and business applications. Experience with Laravel/Livewire, REST integrations, MySQL, automated testing, and Linux production support. Owned systems from requirements through deployment and maintenance, working directly with business users and integration partners.

TECHNICAL SKILLS

PHP/Laravel: PHP 8.x, Laravel, Livewire/Volt, Composer, REST APIs, object-oriented design, SOLID principles

Testing & quality: Automated testing with Pest, PHPUnit, and Playwright; PHPStan, Rector, Pint; CI/CD with GitHub Actions

Data & performance: MySQL, SQLite, Redis, schema design, query optimization

Frontend & platforms: JavaScript, Alpine.js, Tailwind CSS, Bootstrap, HTML/CSS, OpenCart, WordPress

Infrastructure & delivery: Linux, Docker/Compose, AWS EC2/SES/SNS, Nginx, Apache, Cloudflare, Git

PROFESSIONAL EXPERIENCE

Long-term engineering work across ventures operated by the same business owner, spanning e-commerce, client websites, reservations, and internal operations software.

PR Monsters | Lead PHP/Laravel Developer & Systems Administrator (Independent Contractor)
Remote - Los Angeles, CA | 2020-Present

- Replaced spreadsheets with a Laravel/Livewire CRM used daily by five operations staff to manage thousands of leads and tasks; integrated third-party lead imports, SMS follow-up, authorization controls, and automated tests.
- Automated Amazon and Walmart catalog, inventory, order, and shipment workflows, replacing recurring manual work. Handled authentication, retries, rate limits, feed errors, and reconciliation; supported 50-100 orders per day at peak.
- Owned architecture, implementation, integrations, deployment, and production support across e-commerce, reservation, CRM, and internal operations systems while collaborating with operations staff and third-party integration developers.
- Built a Laravel/Livewire reservation and event platform for a local arcade business, implementing scheduling and conflict-handling rules for day-to-day booking operations.
- Diagnosed recurring MySQL slowdowns and connection exhaustion caused by crawler traffic; improved queries and indexes, cached expensive operations, and added application and Cloudflare bot controls.
- Managed Linux servers on AWS EC2 and dedicated hosting, supporting deployments, migrations, queues, web and database services, remote backups, snapshots, monitoring, and incident recovery.

Get Found Marketing | Web Developer & Systems Administrator (Independent Contractor)
Remote - Los Angeles, CA | 2014-2020

- Built, inherited, and maintained websites for approximately 20-30 local-business clients across custom PHP, WordPress, and other legacy platforms.
- Managed dozens of hosted websites, performing migrations, maintaining backups, applying security updates, troubleshooting performance, writing deployment scripts, and supporting analytics, SEO, and advertising-conversion tracking.
- Guided one junior contract developer by defining work, reviewing code, correcting implementations, and introducing Git-based workflows and development procedures.

Dascheap | Web Developer (Independent Contractor)
Los Angeles, CA | 2010-2014

- Sole programmer for an in-office e-commerce and dropshipping business, collaborating with the owner, customer support, and a designer. Extended an off-the-shelf cart platform with product variants, custom fields, new themes, PayPal, and multiple credit-card gateways.
- Built nightly distributor-import pipelines covering more than 20,000 products and automated inventory levels, pricing, and availability.
- Improved B2B checkout and recovered business data after a dedicated-server disk failure; subsequently implemented automated remote database/file backups with copy-verification checks.

SELECTED PROJECTS & OPEN SOURCE

- Insights: Laravel/Livewire personal-finance app with Plaid synchronization, categorization rules, and reporting; CI includes SQLite/MySQL tests, browser workflows, and production-image smoke tests.
- Dibs: Laravel/Livewire task tracker with shared web/MCP business actions, agent task claims, and asynchronous GitHub synchronization; automated tests, browser tests and static analysis in CI. Alpha (prerelease)
- Sessioneer: Self-hosted, LAN-only PHP web UI for managing coding-agent sessions (Claude Code, Codex, OpenCode, and experimental Antigravity), with a containerized web UI communicating with a host-native agent over a UNIX socket; sharded CI with browser checks. Prerelease.
- Homie: Laravel/Livewire home-lab dashboard with configurable cards, Docker/SSH service discovery, and integrations with self-hosted service APIs; login required on every deployment; PHP and browser test suites in CI
- **Open source:** Merged contributions after maintainer review to **SerenityOS** (a Game of Life app, and always-on-top toggle for windows), and **PeckPHP** (full line/column reporting for misspellings).

EDUCATION

Bachelor of Science in Computer Science, California State University, Los Angeles - 2007
