SENIOR PHP / LARAVEL DEVELOPER

Senior PHP/Laravel full-stack developer with 15+ years of PHP and web application experience, including end-to-end ownership of modern Laravel/Livewire systems for CRM, reservations, e-commerce, and internal operations. Strong background in REST APIs, MySQL, automated testing, production troubleshooting, and Linux infrastructure. Experienced in translating loosely defined business needs into practical, maintainable software.

TECHNICAL SKILLS

PHP/Laravel: PHP 8.x, Laravel, Livewire/Volt, Composer, REST APIs, object-oriented design, SOLID principles

Testing & quality: Automated testing with Pest, PHPUnit, and Playwright; PHPStan, Rector; CI/CD with GitHub Actions

Data & performance: MySQL, SQLite, Redis, schema design, query optimization

Frontend & platforms: JavaScript, Alpine.js, Tailwind CSS, Bootstrap, HTML/CSS, OpenCart, WordPress

Infrastructure & delivery: Linux, Docker/Compose, AWS EC2/S3/SNS, Nginx, Apache, Cloudflare, Git

PROFESSIONAL EXPERIENCE

Long-term engineering work across ventures operated by the same business owner, spanning e-commerce, client websites, reservations, and internal operations software.

PR Monsters | Lead PHP/Laravel Developer & Systems Administrator (Independent Contractor)

Remote - Los Angeles, CA | 2020-Present

- Replaced spreadsheets and personal-note workflows with a Laravel/Livewire Kanban CRM used daily by a five-person operations team to manage thousands of leads and tasks. Built an on-demand API route to import leads from a third-party CRM; added SMS follow-up, authorization controls, and an automated test suite.
- Automated Amazon and Walmart catalog, inventory, order, and shipment workflows, replacing recurring manual work. Handled authentication, retries, rate limits, feed errors, and reconciliation; supported 50-100 orders per day at peak.
- Owned architecture, implementation, integrations, deployment, and production support across e-commerce, reservation, CRM, and internal operations systems while collaborating with operations staff and third-party integration developers.
- Built a Laravel/Livewire reservation and event platform for a local arcade business, implementing scheduling and conflict-handling rules for day-to-day booking operations.
- Resolved repeated database slowdowns and connection exhaustion caused by bots and crawlers. Traced the traffic through application and server logs and Cloudflare, then optimized queries and indexes, limited expensive search routes, added caching, and implemented bot controls in both the application and Cloudflare.
- Managed Linux servers on AWS EC2 and dedicated hosting, supporting deployments, migrations, queues, web and database services, remote backups, snapshots, monitoring, and incident recovery.

Get Found Marketing | Web Developer & Systems Administrator (Independent Contractor)

Remote - Los Angeles, CA | 2014-2020

- Built, inherited, and maintained websites for approximately 20-30 local-business clients across custom PHP, WordPress, and other legacy platforms.
- Managed dozens of hosted websites, performing migrations, maintaining backups, applying security updates, troubleshooting performance, writing deployment scripts, and supporting analytics, SEO, and advertising-conversion tracking.
- Guided one junior contract developer by defining work, reviewing code, correcting implementations, and introducing Git-based workflows and development procedures.

Dascheap | Web Developer (Independent Contractor)

Los Angeles, CA | 2010-2014

- Sole programmer for an in-office e-commerce and dropshipping business, collaborating with the owner, customer support, and a designer. Extended an off-the-shelf cart platform with product variants, custom fields, new themes, PayPal, and multiple credit-card gateways.
- Built nightly distributor-import pipelines covering more than 20,000 products and automated inventory levels, pricing, and availability.
- Improved B2B checkout and recovered business data after a dedicated-server disk failure; subsequently implemented automated remote database/file backups with copy-verification checks.

SELECTED PROJECTS & OPEN SOURCE

- [Insights](#): Laravel/Livewire personal-finance app via Plaid with an automated Pest + Playwright suite gating every CI run
- [Sessioneer](#): Self-hosted PHP control panel for local AI coding agents (Claude Code, Codex, OpenCode, AntigraVity).
- [Homie](#): Laravel 13/Livewire home-lab dashboard integrating Docker/SSH discovery and APIs for self-hosted services.
- **Open source**: Merged contributions after maintainer review to [SerenityOS \(a Game of Life app\)](#) and [PeckPHP \(full line/column reporting for misspellings\)](#).

EDUCATION

Bachelor of Science in Computer Science, California State University, Los Angeles - 2007
